

Proposal By: Westboro Tennis
Surfaces
To:
For: Tennis Court Repair and
Surfacing

We will perform the following work and provide the materials indicated:

1. The court will be high pressure washed as needed.
2. The entire court area will be blown clean using 8 H.P. blowers.
3. The structural and random cracks will be cleaned and filled with a combination of Deco Binder, Portland cement and 50 grit silica sand. Following this process these areas will be mechanically sanded.
4. The structural cracks will then be covered with either the Armor or Rite Way membrane crack system. These membranes will be covered with 2 coats of acrylic resurfacer.
5. The court will be covered with a three coat system of Deco 100% acrylic tennis court surfacing.
6. The lines will be painted white.

The cost for the above _____ \$

NOTE: We cannot guarantee that the old cracks will not return or reflect through the new surface or that new cracks will not appear.
